

Andrew Schneider

Front End Engineer

ABOUT

I'm a skilled JavaScript developer, proficient in a wide variety of front end frameworks, libraries and build systems. Node is my preferred backend but I am able to adapt and work in Java and .NET. My deepest passion lies in building modern, scalable web apps which are beautifully responsive down to that last pixel.

I am fascinated with technologies of the future such as blockchain based cryptocurrencies, Artificial Intelligence (AI), and Internet of Things (IoT).

Although I possess strong problem solving skills, I firmly believe problems need not always be solved alone. The ability to know who can help you reach a solution, and how they can do it, is one of my greatest skills.
